## Specialty-Aware Ambient Clinical Documentation Response to MRH-RFP-2026-014

**Prepared for:** Midwest Regional Health

**Prepared by:** DocuMind Health, LLC

**Date of submission:** April 2, 2026

**Primary contact:** Karen Aldrich, Senior Director, Strategic Accounts

**Email:** [kaldrich@documind.health](mailto:kaldrich@documind.health)

**Phone:** (312) 555-1184

# 1. Executive Summary

DocuMind Health welcomes the opportunity to respond to MRH-RFP-2026-014. DocuMind has spent the last six years building the deepest specialty-aware ambient documentation platform in the market. While many ambient documentation vendors are general-purpose, we believe the highest-value, highest-friction documentation challenges in modern healthcare sit inside specialty workflows — and we have organized our entire engineering and clinical content roadmap around that conviction.

Our platform supports forty-one medical and surgical specialties at depth, with proprietary fine-tuned speech and language models for each. We are particularly strong in oncology, cardiology, gastroenterology, and behavioral health — four areas that, based on the volume distribution described in Section 2.1 of the MRH RFP, comprise a meaningful share of MRH's specialty encounter volume.

# 2. About DocuMind Health

DocuMind Health was founded in 2020 by Dr. Sanjay Pillai and a small team of clinical informaticists from the University of Chicago and Northwestern. Our headquarters are in Chicago; we maintain engineering offices in Madison and Toronto. We employ 226 people, of whom 84 are clinical content specialists with specialty-specific clinical training.

We serve approximately 31,000 clinicians across 47 health systems and specialty practice groups. Our customer base skews toward academic medical centers and specialty-heavy integrated delivery networks. Notable customers include three NCI-designated cancer centers and two leading cardiovascular specialty groups.

## 3. Technical Approach

### 3.1 Specialty depth

Our differentiator is depth. DocuMind Health supports forty-one specialty note formats, each developed in partnership with practicing specialists and fine-tuned against specialty-specific clinical content. We support every specialty referenced in Section 2.1 of the MRH RFP at full depth, including oncology subspecialties (medical, radiation, surgical), cardiology subspecialties (general, electrophysiology, interventional, heart failure), and the four behavioral health subspecialty categories most commonly billed.

### 3.2 EHR integration

DocuMind Health is an Epic App Orchard partner and an Oracle Cerner authorized integration partner. Both integrations are mature and have been deployed at production scale: 39 Epic customers, 14 Cerner customers. Integrations include bi-directional write-back, problem list updates, and Hyperdrive / Millennium embedded experiences.

### 3.3 Speech and language models

DocuMind Health uses proprietary speech and language models fine-tuned per specialty. Our speech models are trained on more than 18,000 hours of specialty-specific clinical encounters and continuously refined. Median note latency in production is 94 seconds across all specialties; oncology and cardiology specialty notes typically complete in under 110 seconds despite their structural complexity.

### 3.4 Languages

Native ambient capture is supported in English and Spanish across all specialties. Mandarin and Vietnamese ambient capture are supported in primary care and a subset of medical specialties; deployment to additional specialties is on our 2026–2027 roadmap.

### 3.5 Identity and access

SSO is supported via Microsoft Entra ID, Okta, Ping Identity, and any SAML 2.0 compliant IdP. Native iOS application; Android application in active development with target general availability in Q3 2026. Web experience is production-ready today.

## 4. Compliance and Security

DocuMind Health maintains a comprehensive compliance posture appropriate for an enterprise healthcare vendor.

| Framework                           | Status                      | Verified                       |
|-------------------------------------|-----------------------------|--------------------------------|
| HIPAA Privacy and Security Rule     | Compliant                   | Annual internal review         |
| SOC 2 Type II                       | Attested by Schellman & Co. | September 2025                 |
| HITRUST CSF r2                      | Certified                   | March 2025; renewal March 2027 |
| State privacy laws (CA, TX, WA, IL) | Compliant                   | Continuous                     |

### 4.1 Business Associate Agreement

DocuMind Health is prepared to execute the MRH standard BAA template attached as Exhibit B of the RFP without material modification.

### 4.2 Data residency

All customer PHI is stored within the contiguous United States. DocuMind Health offers customer-selectable primary region across three AWS regions: us-east-1 (Virginia), us-east-2 (Ohio), and us-west-2 (Oregon). MRH may select its preferred region at contract execution and may request migration between regions at any time with sixty days' notice.

### 4.3 Encryption

AES-256 encryption at rest, TLS 1.3 in transit. Customer-managed encryption keys available through AWS KMS at no additional cost.

### 4.4 Model training

DocuMind Health does not use customer PHI or customer audio recordings to train, fine-tune, or otherwise improve our speech or language models without the customer's explicit, prior, written, opt-in consent. Customers may selectively opt in to participate in DocuMind's continuous improvement program; absent such opt-in, customer data is processed solely to provide the contracted Service.

## 5. Commercial Terms

### 5.1 Pricing

| Component                        | Rate                        | Annual (3,500 providers) |
|----------------------------------|-----------------------------|--------------------------|
| Platform subscription            | \$65 per provider per month | \$2,730,000              |
| Implementation (one-time)        | \$75,000                    | —                        |
| Annual support (enterprise tier) | \$25,000 per year           | —                        |
| Three-year contract value        | —                           | \$8,340,000              |

### 5.2 Contract term and renewal

- Initial term: three years
- Renewal: successive one-year renewal terms, terminable by either party with 90 days' written notice
- Price escalation: capped at the lesser of 3% per year or US CPI, applied at the start of each renewal year
- Termination for convenience: available to either party with 90 days' notice after the initial term

## 6. Intellectual Property and Data Ownership

DocuMind Health's standard intellectual property and data ownership terms are designed to balance customer interests with the operational realities of providing a continuously improving specialty-aware platform. Key provisions are summarized below.

### 6.1 Ownership of clinical notes

*"Clinical notes generated through the Service shall be jointly owned by Customer and DocuMind Health. Customer retains all rights necessary to use such clinical notes in the ordinary course of patient care, including but not limited to incorporation into the patient's medical record, transmission to other treating providers, and use in billing and quality reporting. DocuMind Health retains a perpetual, irrevocable, worldwide, royalty-free license to use de-identified versions of clinical notes and Service outputs for purposes including but not limited to research, benchmarking, model improvement, and product development."*

### 6.2 Audio recordings

*"Audio recordings of clinician-patient encounters captured through the Service shall be retained by DocuMind Health for a period of thirty (30) days following the encounter to support note generation, quality assurance, and dispute resolution. Customer may request export of audio recordings during this thirty-day retention window; audio recordings will be permanently deleted from DocuMind Health systems at the conclusion of the thirty-day retention window and may not be recovered thereafter."*

### 6.3 Proprietary models

DocuMind Health's speech and language models are proprietary to DocuMind Health and are not transferable. In the event of contract termination, Customer's right to use the Service ends; the underlying speech and language models remain the exclusive property of DocuMind Health.

## 7. Implementation

We propose a ten-week phased implementation: two weeks of environment setup and integration build, two weeks of specialty-content tuning per the MRH service-line priorities, four weeks of pilot at two sites, and a final two-week stabilization phase before broader rollout begins. We assign a dedicated Clinical Implementation Lead with specialty clinical training matched to MRH's largest service lines.

## 8. References

- **Lakefront Cancer Institute** (NCI-designated comprehensive cancer center, ~720 providers): live across medical, surgical, and radiation oncology since Q3 2024
- **Heartland Cardiovascular Associates** (specialty cardiology group, ~290 providers): live since Q1 2024
- **Pacific Crest Behavioral Health** (multi-state behavioral health network, ~410 clinicians): live since Q4 2024

## 9. Closing

We appreciate MRH's careful and thorough RFP process. DocuMind Health is prepared to invest meaningfully in the success of this engagement and looks forward to a follow-up conversation with the evaluation committee. Please do not hesitate to reach out with questions, clarifications, or requests for additional detail.
