Mobile: (650) 555-0917

Executive Summary

Thank you for the opportunity to respond to MRH's RFP. We believe MRH and ClinicalNote.ai are uniquely aligned: you are an ambitious health system ready to move quickly on AI; we are the fastest-growing ambient documentation platform in the country, built from day one for the AI era of healthcare.

Three things differentiate ClinicalNote.ai from legacy ambient platforms:

- **Modern AI architecture.** Our platform was built post-2023 on a foundation-model-first design. Older platforms still wrap legacy speech engines
- **Speed of innovation.** We ship to production every two weeks. We add capabilities faster than any competitor in the category
- **Aggressive economics.** Our pricing is approximately half that of legacy ambient platforms. We pass our AI-native cost structure on to our customers

We have been in market for thirty months, have grown from three to ninety-two engineers, and now serve forty-one health systems and clinic networks. MRH would be our largest customer, and we are eager to make that partnership work.

Why ClinicalNote.ai

ClinicalNote.ai was founded in late 2023 by Maya Chen, formerly product lead at OpenAI for clinical applications, and Dr. Rajeev Iyer, a practicing hospitalist. Maya saw that legacy ambient platforms were architected before modern foundation models existed; their stacks carry years of accumulated complexity that slows them down. We started from a clean sheet.

We closed our Series A in 2024 (Andreessen Horowitz led; Khosla and Founders Fund participated) and our Series B in early 2026 (Greylock led). We are ninety-two people today, growing to approximately one hundred and forty by the end of 2026.

Our Platform

Ambient capture

ClinicalNote.ai captures the clinician-patient encounter through a lightweight web application or native mobile app — no on-premise hardware, no badge devices, no clinic-side setup. Median latency from encounter end to draft note availability is 62 seconds; we are the fastest in the category by a meaningful margin.

EHR integration

We currently support Epic Hyperdrive at full depth, including bi-directional write-back, problem-list updates, and Hyperdrive sidebar embedding. We have deployed our Epic integration at thirty-eight customers.

Oracle Cerner Millennium integration is on our 2026 roadmap; we expect general availability by Q4 2026. We are happy to discuss a phased approach with MRH that begins with Epic facilities in 2026 and adds Cerner facilities as our integration becomes available.

Specialty coverage

We support primary care, eighteen medical and surgical specialties, and four behavioral health note formats. Our note templates are continuously refined by a dedicated clinical content team.

Languages

Our platform supports ambient capture in English at full quality today. Spanish support is in active development and is committed for general availability in Q3 2026. We are happy to work with MRH on a phased rollout that begins with English-speaking encounters and adds Spanish capability as soon as we ship it.

Identity and devices

SSO via Microsoft Entra ID, Okta, and Google Workspace. Native iOS and Android applications. Web experience optimized for clinical workflows.

Security and Compliance

ClinicalNote.ai takes security and compliance seriously. Our platform meets HIPAA requirements and is built on a modern, encrypted, cloud-native architecture.

Compliance status

Framework	Status
HIPAA	Compliant; our platform is designed for HIPAA workloads
Business Associate Agreement	Available; we offer our standard BAA template, and we are flexible on customer-proposed terms subject to legal review
SOC 2 Type II	In progress; targeted completion Q4 2026 with Schellman & Co.
HITRUST CSF r2	Roadmap item for 2027

Encryption and data handling

All customer data is encrypted at rest using AES-256 and in transit using TLS 1.3. Our production environment is hosted on Google Cloud Platform, primarily in us-west-1 (Oregon) with replication to us-central-1 (Iowa).

Continuous model improvement

ClinicalNote.ai’s platform improves continuously through learnings from our customer base. We use de-identified and anonymized customer interactions to improve note quality, accuracy, and specialty-specific formatting across all of our customers. Customers may opt out of this continuous improvement program by submitting a written request to our Data Protection Officer, in which case the customer’s data will be excluded from our model improvement pipeline within thirty days of receipt of the opt-out request.

Investment Summary

ClinicalNote.ai’s pricing is aggressively competitive and reflects our AI-native cost structure.

Component	Rate	Annual (3,500 providers)
Platform subscription	\$45 per provider per month	\$1,890,000
Implementation (one-time)	\$25,000	—
Annual support	\$15,000 per year	—
Three-year contract value	—	\$5,760,000

Contract terms

- Initial term: 1 year
- Renewal: month-to-month after initial term, terminable with 30 days' notice
- No automatic multi-year renewal
- No price escalation built into the contract

Data ownership

MRH retains full ownership of all clinical notes generated through the ClinicalNote.ai Service. Audio recordings are retained by ClinicalNote.ai for thirty days for quality and improvement purposes, after which they are deleted from our production environment.

Implementation

We have refined a six-week implementation playbook that gets customers to production faster than any competitor in the category. Week 1: environment setup and integration sandbox. Weeks 2 to 3: Epic integration build and validation. Week 4: pilot user training. Weeks 5 to 6: pilot deployment and expansion planning.

Customer References

- **Northern Plains Medical Group** (regional multi-specialty group, 380 providers): live since Q2 2025
- **Bay Area Community Health** (federally qualified health center network, 220 providers): live since Q3 2025
- **Lakeside Primary Care Partners** (independent PCP network, 140 providers): live since Q4 2025

Product Roadmap

We want to be transparent with MRH about what we ship today and what is coming soon. The following capabilities are in active development.

Capability	Target availability
Oracle Cerner Millennium integration	Q4 2026
Spanish ambient capture	Q3 2026
SOC 2 Type II attestation	Q4 2026
Native Android application (current is responsive web)	Q3 2026
HITRUST CSF r2 certification	2027

We are eager to discuss a phased partnership that aligns deployment with the maturation of these capabilities. We welcome a follow-up conversation with the MRH evaluation committee on the structure of such a phased approach.
